

# CURRENT & EMERGING TECHNOLOGIES

CONFERENCE

# Audit Innovation

December 10, 2024

## Presenter

### **Sara Watson, CPA**

Director, Assurance Quality Leader  
Forvis Mazars US  
Charlotte, NC

[Sara.Watson@us.forvismazars.com](mailto:Sara.Watson@us.forvismazars.com)  
980-729-7429

# Agenda

- Selecting Technology & Change Management
- Supervising Technology
- ASB Technology Survey
- ASB Risk Assessment Practice Aid & Examples
- Technology Tools for Use in the Audit

# Selecting Technology & Change Management

# Overall Change Management

Change fatigue is rampant

Employer flip-flopping is causing frustration

Companies could be doing more to help employees adapt to change

Constant change isn't just a COVID trend

## Most Common Effects of Change Fatigue

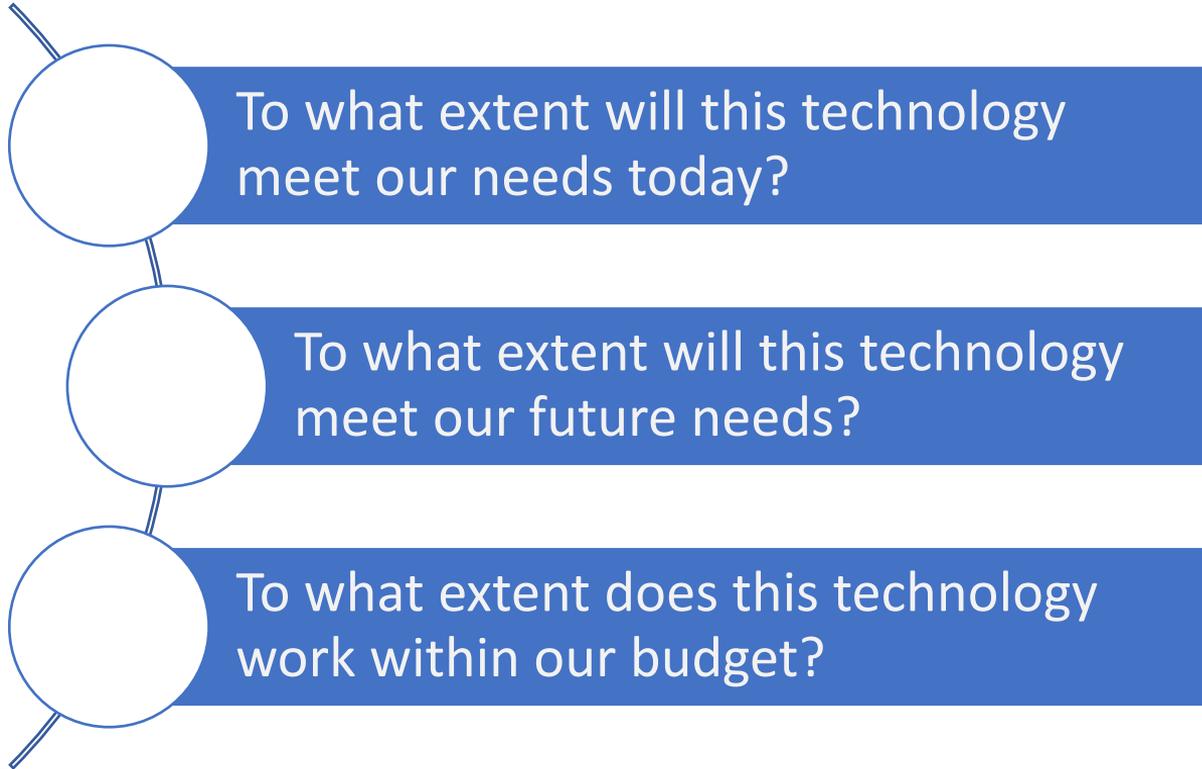

71% of employees agree that they're overwhelmed with the amount of change at their job

# Technology Change Management

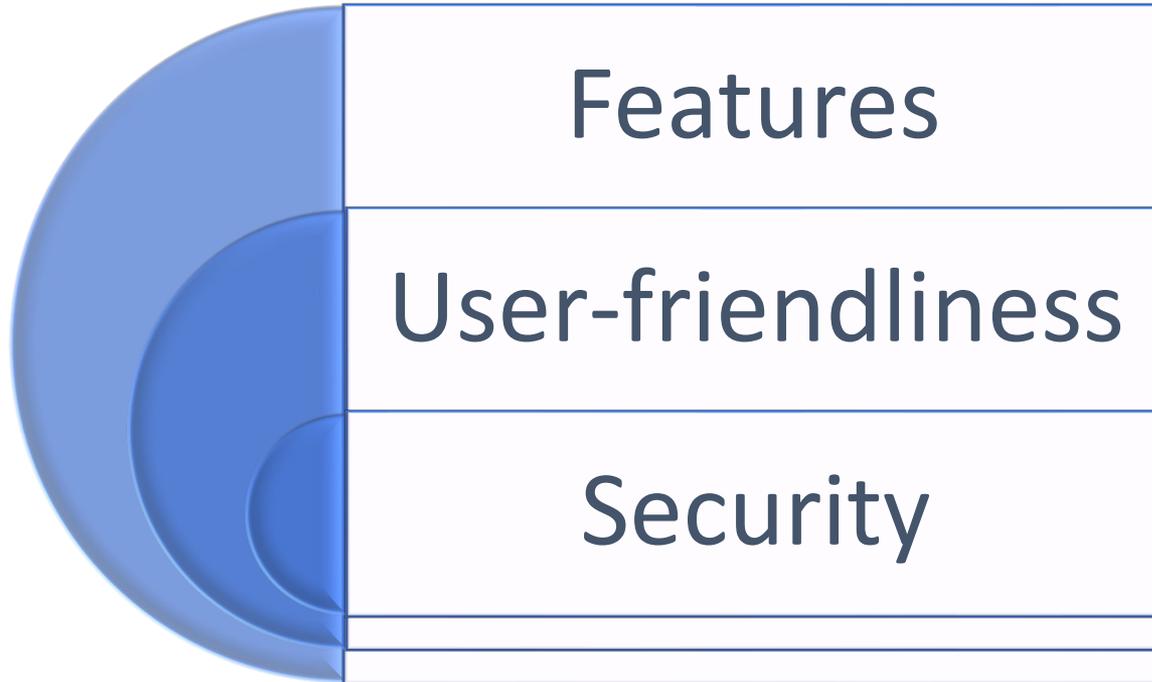

Technology constantly changes, but the steps to successful technology change management remain static

## Three Questions to Ask

Source: Vera Solutions | *10 Criteria to Evaluate When Choosing a New Technology*

Will It Meet Our Needs Today? | Consider These Criteria:

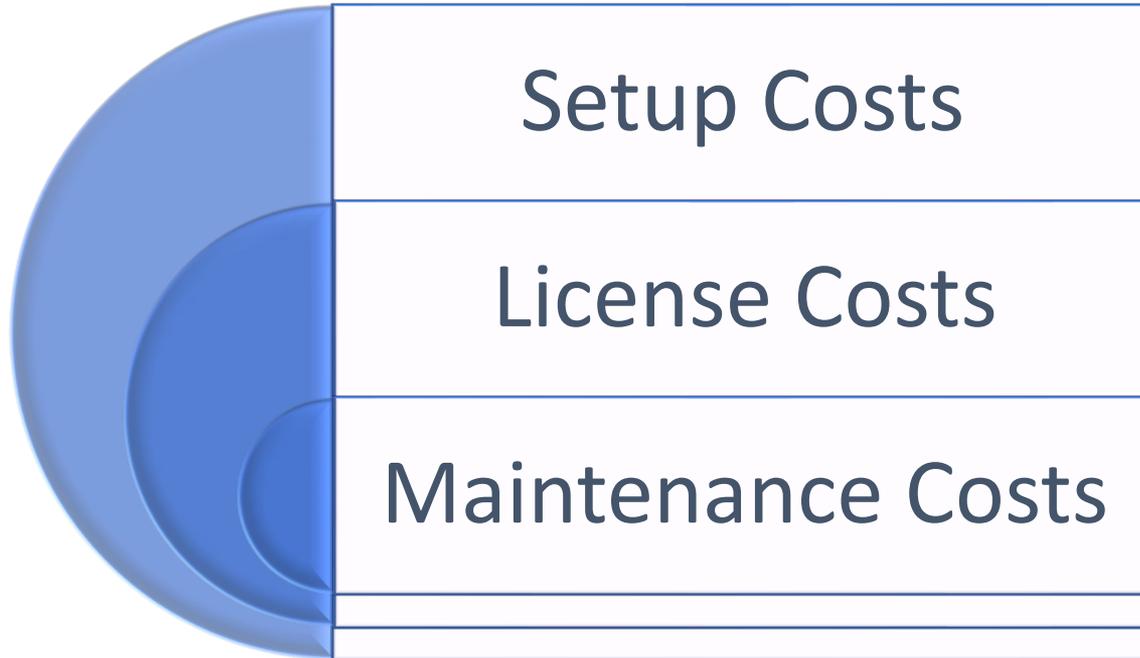

Source: Vera Solutions | *10 Criteria to Evaluate When Choosing a New Technology*

Will It Meet Our Future Needs? | Consider These Criteria:

Source: Vera Solutions | *10 Criteria to Evaluate When Choosing a New Technology*

Will It Work Within Our Budget? | Consider These Criteria:

Source: Vera Solutions | *10 Criteria to Evaluate When Choosing a New Technology*

# Supervising Technology

## ISQM/SQMS Considerations

SOC Reports

Vendor Risk  
Assessments

Engagement  
Team Biases

Detailed  
Reviewers

# SQMS Vendor Assessments

A105. The firm may consider the following matters in obtaining, developing, implementing, and maintaining an IT application:

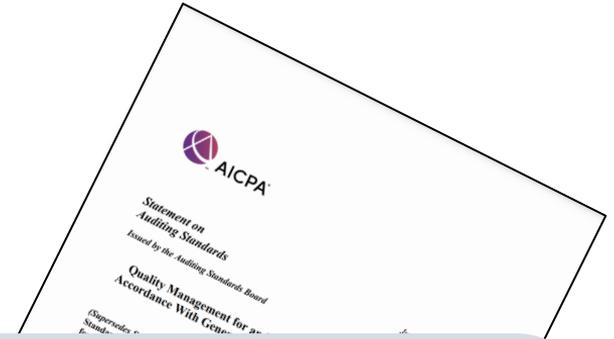

- The data inputs are complete and appropriate.
- Confidentiality of the data is preserved.
- The IT application operates as designed and achieves the purpose for which it is intended.
- The outputs of the IT application achieve the purpose for which they will be used.
- The general IT controls necessary to support the IT application's continued operation as designed are appropriate.
- The need for specialized skills to use the IT application effectively, including the training of individuals who will use the IT application.
- The need to develop procedures that set out how the IT application operates.

A106. The firm may specifically prohibit the use of IT applications or features of IT applications until such time that it has been determined that they operate appropriately and have been approved for use by the firm. Alternatively, the firm may establish policies or procedures to address circumstances in which the engagement team uses an IT application that is not approved by the firm. Such policies or procedures may require the engagement team to determine that the IT application is appropriate for use prior to using it on the engagement ...

# SQMS Vendor Assessments, Continued

Par. A113:

- The related quality objective and quality risks
- The nature and scope of resources, and the conditions of the service (e.g., in relation to an IT application, how often updates will be provided, limitations on the use of the IT application and how the service provider addresses the confidentiality of data)
- The extent to which the resource is used across the firm, how the resource will be used by the firm and whether it is suitable for that purpose
- The extent of customization of the resource for the firm
- The firm's previous use of service provider
- The firm's previous use of service provider

## Biases Identified in Engagement Team Professional Judgments (¶A35)

- *Availability bias*, which is a tendency to place more weight on events or experiences that immediately come to mind or are readily available than on those that are not
- *Confirmation bias*, which is a tendency to place more weight on information that corroborates an existing belief than information that contradicts or casts doubt on that belief
- *Groupthink*, which is a tendency to think or make decisions as a group, discouraging creativity or individual responsibility
- *Overconfidence bias*, which is a tendency to overestimate one's own ability to make accurate assessments of risk or other judgments or decisions
- *Anchoring bias*, which is a tendency to use an initial piece of information as an anchor against which subsequent information is inadequately assessed
- *Automation bias*, which is a tendency to favor output generated from automated systems, even when human reasoning or contradictory information raises questions about whether such output is reliable or fit for purpose

# ASB Technology Survey

# Auditing Standards Board (ASB) Survey

Conducted Fall 2022 to study auditors' use of IT

**The Big Question:** Is U.S. GAAS an impediment to firms using technology in the audit?

Which technologies are used in the audit and in which audit areas?

AI, Blockchain, Cloud Computing, Data Analytics, RPA, Textual Analysis  
Planning, Risk Assessment, Substantive Testing, Reporting

135 complete responses

Survey focus:  
• Small to medium size firms  
Experience level:  
• Average: 23 Years  
• Range: 3 to 50 Years

# Consider Technology by Phase of the Audit

## Key Takeaways

**Is U.S. GAAS an impediment to firms using technology in the audit?**

Analysis from the Survey: **No**

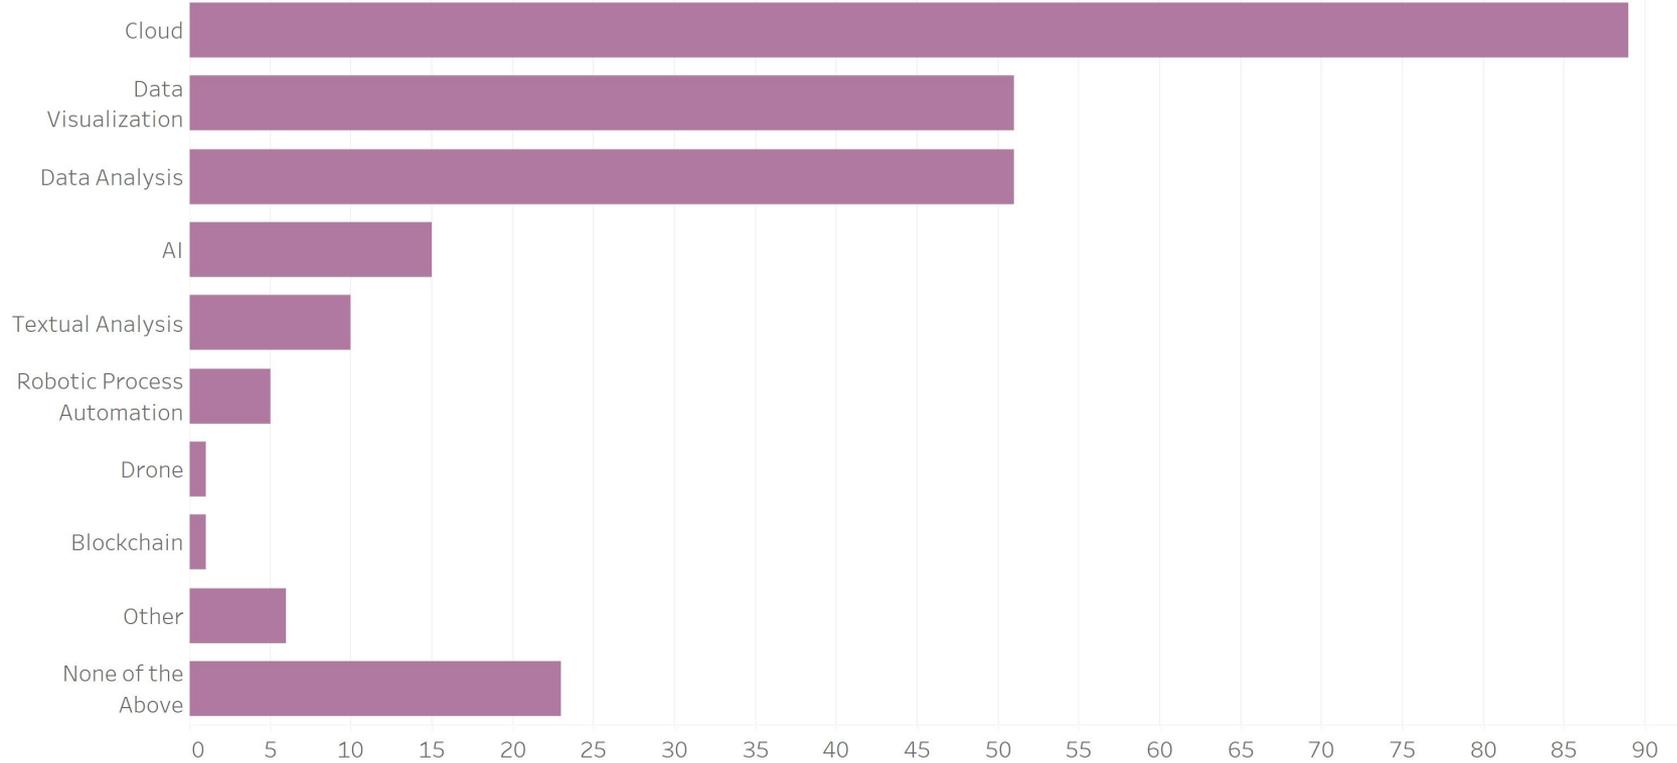

**What are the top barriers to adoption?**

Lack of  
training/infrastructure

Isn't useful

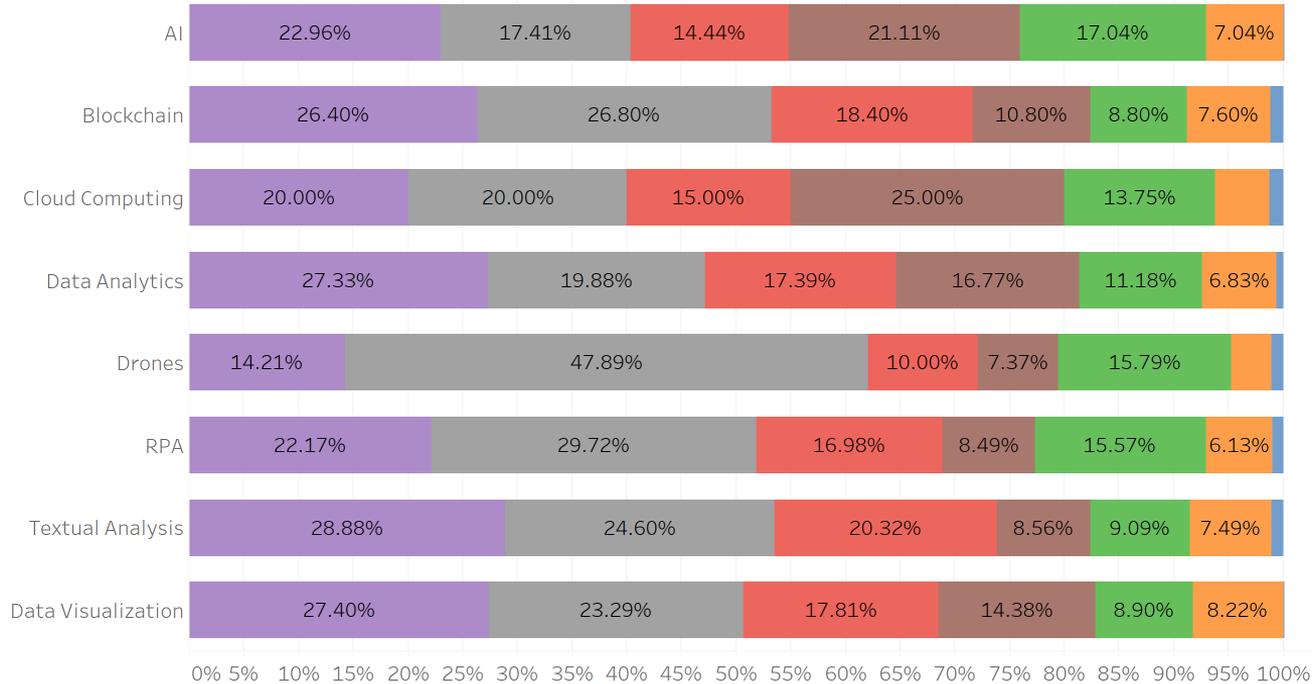

Too expensive

# Top Emerging Technologies Used

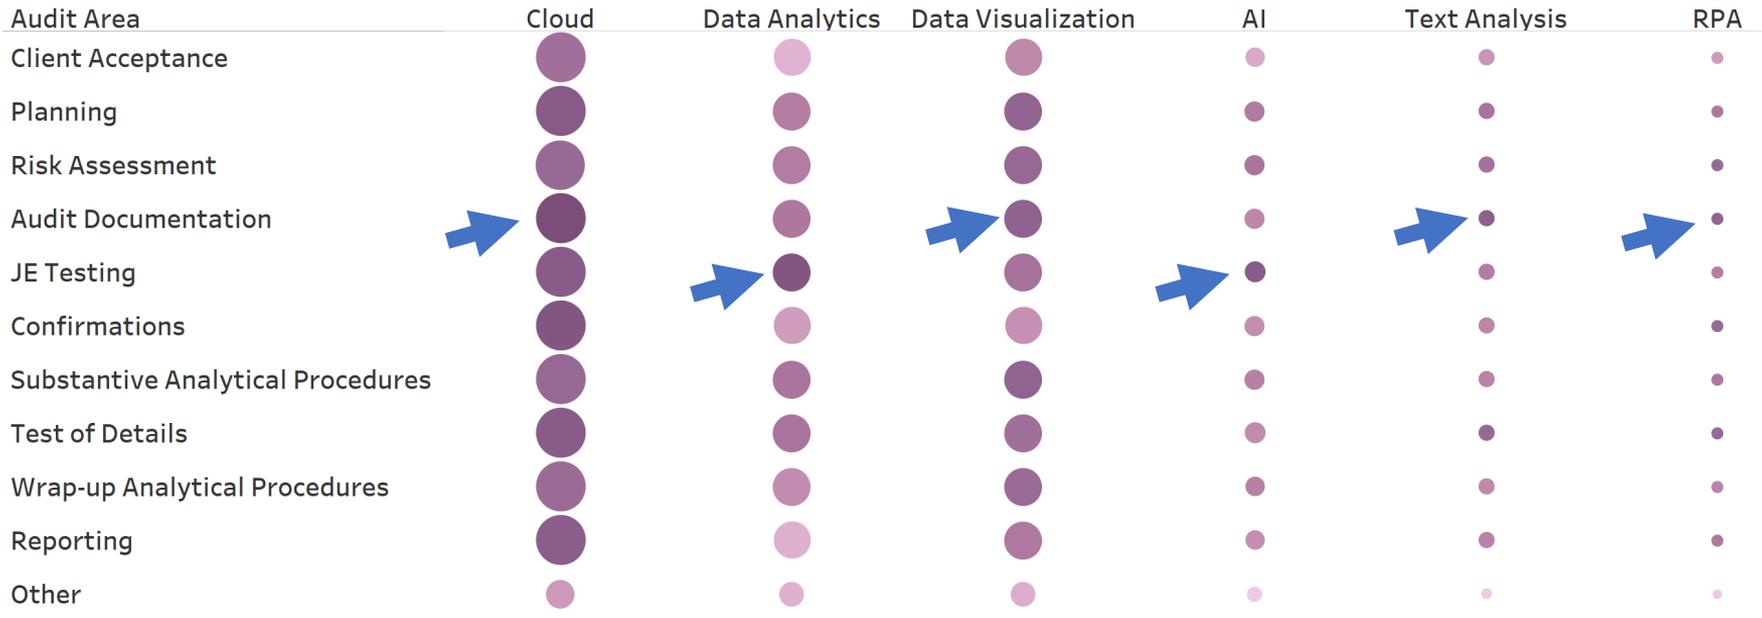

# What limits technology use?

■ Lack of Training  
 ■ Not Useful  
 ■ Difficult to Use  
 ■ Client Challenges  
 ■ Costly  
 ■ Professional Challenges  
 ■ Other

# Prevalence and Relevance of Technology by Audit Area

Size of circle = how many respondents used the technology by area

Color density = how important respondents felt the technology was to that area

Arrows = highest relevance score

# ASB Risk Assessment Practice Aid & Examples

# Use of Technology in an Audit of Financial Statements | Part 01: The use of automated tools and techniques in the auditor's risk assessment

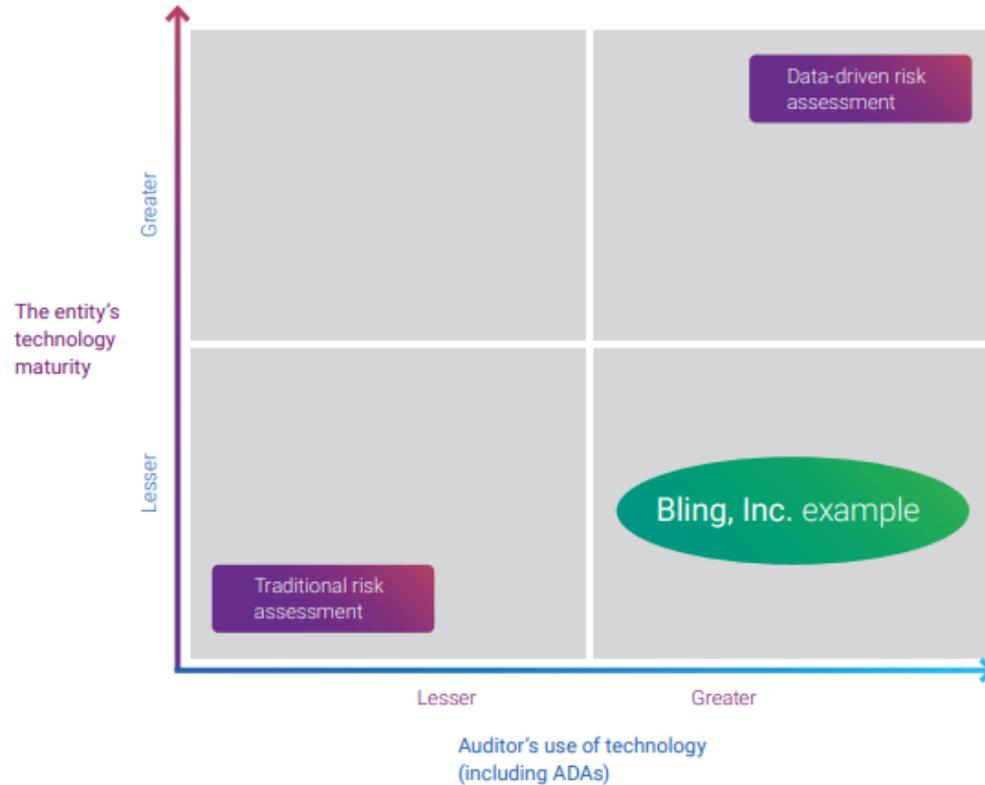

Example: Bling, Inc.

Other uses of technology

[Download](#) the free practice aid.

# Bling, Inc (Module 1-C)

Exhibit 1C-1: Illustration of Bling, Inc.'s technology maturity and Member CPA Firm's use of technology

## Bling, Inc (Module 1-C)

### Traditional approach

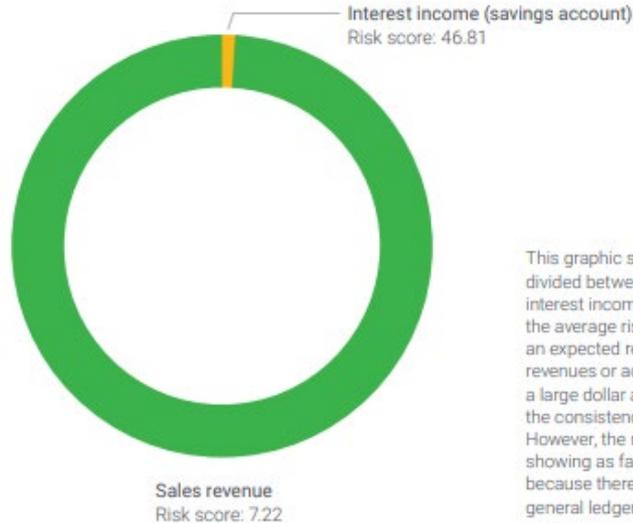

- Inquiries of management
- Analytical procedures
- Observation & inspection

### Technology-enabled approach

- Granular risk assessment on higher risk transactions
- Analysis of general ledger (100% population)

# Bling, Inc (Module 1-C)

Figure 1C-1: Allocation of amounts compared to average risk by type of revenue<sup>4</sup>

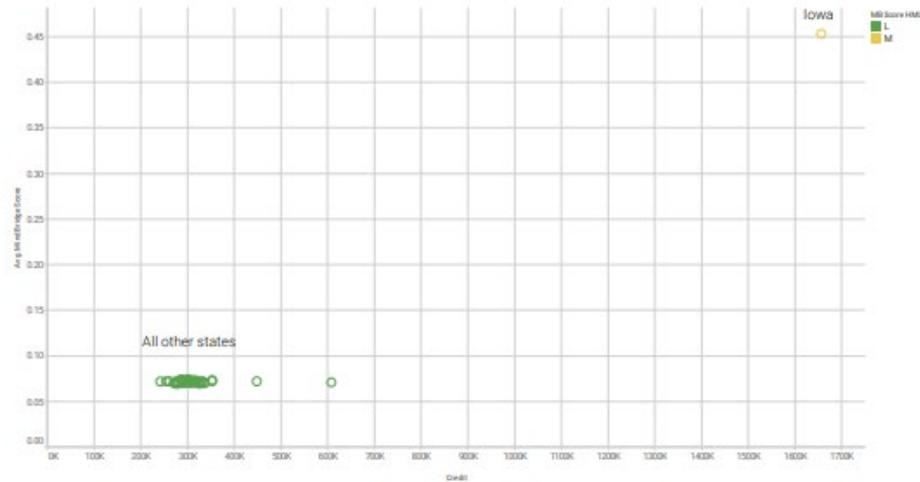

This graphic shows the relative amount of revenue divided between operating sales revenue (green) and interest income from a savings account (yellow), with the average risk score annotated on the graphic. It is an expected result that large amounts of operational revenues or activities should be fairly similar and have a large dollar amount total but a low risk score due to the consistency and general similarity of transactions. However, the relatively small other revenue amount is showing as fairly high risk, likely due to its infrequency because there are not many transactions in the entire general ledger that are similar to it. This is because savings account interest transactions may only happen 12 times a year. The yellow component is likely immaterial and insignificant to the audit due the small dollar amount and the low-risk nature of savings account interest and may not warrant further audit considerations.

**Note:** The identification of interest income in the same account as sales revenue may indicate IT design or control issues; this anomaly may be further considered by Member CPA Firm in performing the audit and may be shared with management for their further consideration.

# Bling, Inc (Module 1-C)

Figure 1C-2: Scatter plot of average revenue risk by amount per region<sup>5</sup>

The data analytic is looking at the characteristics of transactions so that homogenous transactions are grouped together, which results in a lower risk score. The technology then isolates transactions with different characteristics that may result in a higher risk score. Simply put, this helps the auditor isolate different transactions.

This graphic shows the total amount of revenue compared to the averaged risk score for each state of operations. The top right yellow circle represents the state with the greatest revenue as well as the highest average risk. This is an unusual finding because, typically, the largest center of operations that has the most transactions will also have the lowest risk scores. This is because by definition there are high volumes of similar transactions, which helps reduce the aggregate risk score. To be this different from the cluster of green circles representing other states implies that this state has very different operations than the others.

## Bling, Inc (Module 1-C)

### Traditional approach – result

- All revenue transactions are higher risk

### Technology-enabled approach - result

- Interest income subset of revenue was higher risk but not material
- Sales revenue transactions from Iowa were higher risk
- Lower risk for all other sales revenue transactions

# Other Uses of Technology

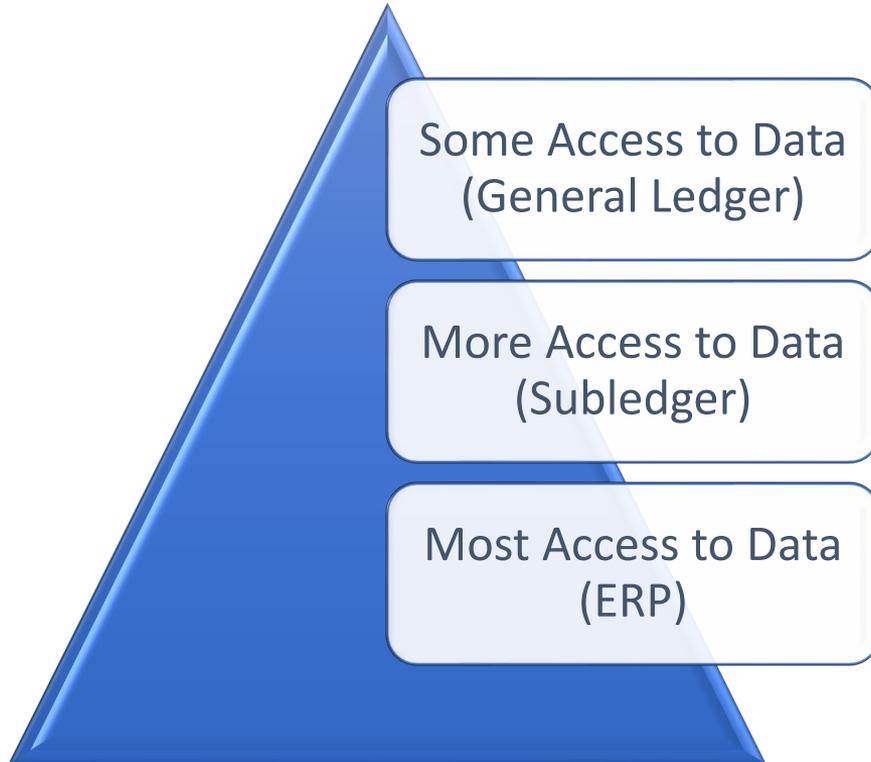

Exhibit 1B-2: Examples of ADAs in risk assessment

	Less access to data	More access to data
<b>Examples of ADAs in risk assessment</b>	<p>With access to an entity's current and prior-year data, you may use an ADA to identify general ledger accounts that may have unusual changes from previous years, including unexpected trends in liquidity, leverage, and margin ratios that may result in changes to the planned nature, timing, and extent of other risk assessment procedures or further audit procedures to be performed in response to the assessed risk.</p> <p>General ledger ADAs may include the following:</p> <ul style="list-style-type: none"> <li>• Journal entry queries</li> <li>• Keyword search – "related party"</li> <li>• Unusual posters</li> <li>• Unusual dates</li> <li>• Posting pattern analysis</li> <li>• Debit/credit combinations</li> <li>• Account posting timing</li> </ul> <p>(See example 2-2, "Preliminary General Ledger Account Balance Analysis," of appendix A, "Examples of ADAs Used in Performing Risk Assessment Procedures," in AICPA Guide to Audit Data Analytics.)</p>	<p>With access to an entity's subledger transactional data, you may use an ADA to produce a visualization of transaction detail to assist you in identifying areas that might represent specific risks relevant to the audit, including the existence of unusual transactions and events, and amounts, ratios, and trends that warrant investigation.</p> <p>Subledger ADAs may include the following:</p> <ul style="list-style-type: none"> <li>• Many business rule-based tests</li> <li>• Outlier detection</li> <li>• Benford's law</li> <li>• Regression</li> <li>• Cluster analyses</li> </ul> <p>(See par. A60 of AU-C section 500)</p> <p>(Note: When you have this level of data [and potentially gain comfort over a complete population] your audit strategy may shift toward a controls-based approach to support the reliance on the inputs used for analytics.)</p> <p>(See example 2-5 of appendix A in AICPA Guide to Audit Data Analytics.)</p>

# Technology Tools for Use in the Audit

# Consider Technology by Phase of the Audit

# MindBridge

- Apply control points (risk attributes)
- Risk dashboard (high / medium / low risk entries)
- Predictive analytics and trend/ratio analysis
- AP / AR (vendor/customer) risk analysis
- Automated completeness testing
- Apply control points (risk attributes)
- Risk dashboard (high / medium / low risk entries)
- Select entries for testing
- Export for audit workpapers

Administration expenses  
Administration expenses include depreciation and amortization. See the breakdown below.

	2017	2016
Depreciation of equipment	11	11
Amortization of software	3	4
Depreciation of real estate held for own use	2	2
<b>Total</b>	<b>16</b>	<b>17</b>

Employee expenses

	2017	2016
Salaries	228	232
Post-employment benefit costs	135	133
Social security charges	34	38
Other personnel costs	80	82
Shares, share appreciation rights, share options and LTIP	2	1
<b>Total</b>	<b>479</b>	<b>485</b>

Employees  
The average number of employees is 4,113, including 161 agents (2016: 4,500, including 264 agents). Due to the sale of UMG and IAK the number of employees decreased as per 31 October 2017 by approximately 1,200 employees.

Nederland's strategic objective to optimize its portfolio across its businesses. The divestment lead to a book gain of EUR 207 million pre-tax, which is reported as "other income". The remainder relates to the model changes in 2017.

The higher impairment charges are mainly due to the increased portfolio in consumer loans.

Investment income	2.173	2.134
Fees and commissions income	329	353
<b>Total revenues</b>	<b>4.707</b> ▲	<b>4.974</b> ▲

*Pensions*

Revenues at the business line Pensions decreased in 2017 to EUR 1,253 million (2016: EUR: 1,336 million). The recurring premium production decreased. This is partly caused by a shift from traditional pension products to PPI, for which Aegon Nederland receives fees, and partly due to ongoing strong price competition, especially in the midmarket segment. Although market circumstances for buyout deals remained difficult (e.g. low interest rates), single premium production increased, mainly due to the introduction of the new product 'Uitkerend Beleggingspensioen'.
